Bright sunshine. Power cut. Solar off. Why?

What standard on-grid solar does when the grid fails.

Standard on-grid solar

AUGZET

It must not keep feeding a dead grid.

Standard grid-connected solar disconnects during an outage for safety.

This helps prevent electricity flowing into lines that crews may be working on.

Bill savings and outage backup are different requirements.

Before buying, ask what will supply your selected loads during a cut.

A backup-capable design must be specified; sunlight alone is not the promise.
